

- What is money?** ☐ **7** Like pornography, we know money when we see it—but it's hard to define. **Perritt** tries.
- Care and feeding of the B.S. chemist** ☐ **10** Can one be recognized as a professional after only four years of college?
- History never repeats itself . . . well, hardly ever** ☐ **13** In which we celebrate the 85th birthday of **Henry Hass**.
- Creativity?** ☐ **14** Perhaps we could stimulate this wondrous process, if only we knew how it worked. **Reid** examines a variety of hypotheses.
- Managing R&D in China** ☐ **20** How things work when the government funds all R&D is described by **Li Su**.
- Mistakes in regulating biotechnology** ☐ **23** Here's what we have to avoid, according to **Clark**.
- Modeling and simulation in the coatings industry** ☐ **26** "Make your errors mathematically, not in real equipment." **Wu** explains how to implement this advice.
-
- Adventures in the micro world** ☐ **30** **Contact!** Here **Kelley** initiates his series on the critical minutiae of surfaces.
-
- Baking with the corona wind** ☐ **35** Now *here's* a dandy way to heat things. **Curry** uses it for foodstuffs.
- Composite electroceramics Part 2** ☐ **38** Here is yet another window of opportunity opened by the demands of the microelectronics industry. **Newnham** looks through.
- Controlling environmental carcinogens** ☐ **46** A critical look at alleged culprits—DDT, EDB, and others—by **Wong**.
- Lubrication in practice** ☐ **55** Another of those functional chemicals niches is reviewed by **Garcia-Borras**.
- Synthesis using polymeric reagents** ☐ **58** By shuffling a mediator between "make" and "use" containers, **Patchornik** has improved peptide and other syntheses.

- ☐ **1 The Industrial Chymist**
in which are guidelines for challenging the new year.
- ☐ **2 Write On**
in which readers defend the workaholic boss and cut the baloney.
- ☐ **2 P. S.**
in which leaning left or right changes your view of Bhopal.

- ☐ **3 Heart Cut**
in which **Bisio** and **Kreps** summarize magnetic-drive reactors, 3-D computers, and the generic drug invasion.
- ☐ **6 View from the Top**
in which **Kriebel** reasons from the finding that technical types have made excellent project champions.

- ☐ **29 Guest Editorial**
in which **The Washington Post** suggests that Saudi Arabia may not be the OPEC country the world should worry about.
- ☐ **34 TECHGRAMJapan**
in which silkworms work overtime to regain their turf and plastics are coated with ceramics.

- ☐ **OBC The Last Word**
in which we see the company of the future.

CHEMTECH (ISSN 0009-2703) is published monthly by the American Chemical Society at 1155 16th St., N.W., Washington, D.C. 20036. Second-class postage paid at Washington, D.C., and additional mailing offices. POSTMASTER: Send address changes to CHEMTECH, Membership and Subscription Services, P.O. Box 3337, Columbus, Ohio 43210.

Subscriptions—1-year prices: Members, \$34; Nonmembers (individual personal use), \$44; Companies, institutions, libraries, \$244; Student members, \$15; Mexico and Canada add \$6/year for postage. Europe add \$11/year for postage. All other countries add \$17/year for postage. All foreign subscriptions are sent by air freight. Send payment to ACS Controller, 1155 16th St., N.W., Washington, D.C. 20036. Single copies, \$21 (current), \$24 (pre-1987). Phone orders can be placed for printed, microfiche, and

microfilm editions by calling, toll free, the sales office at (1)(800) 424-6747 from anywhere in the continental U.S. From Washington, D.C., call 872-8065. Visa, Master Card, and American Express accepted. Rates above do not apply to nonmember subscribers in Japan, who enter subscriptions with Maruzen Co. Ltd., 3-10 Nihon bashi 2-chome, Chuo-ku, Tokyo 103, Japan; (03) 272-7211.

Editorial Matters: Refer all editorial matters to B. J. Luberoft, Editor, CHEMTECH, American Chemical Society, 1155 16th St., N.W., Washington, D.C. 20036.

Advertising: Centcom, Ltd., T. Koerwer, Pres., 500 Post Road East, Westport, CT 06880; (203) 226-7131.

Service: For change of address, send old label with new address to ACS Membership and Subscription Services, P.O. Box 3337, Columbus, Ohio 43210. Allow 6 weeks to effect change. Refer claims for missing issues, information on status of accounts, etc., to this office. Claims for missing issues will not be allowed if (a) notice of address change was not received in specific time; (b) North Ameri-

can claim was made 90 days beyond issue date; (c) other claim was made one year beyond issue date.

Page 30

Where are the robots?

72

☐Sadly, according to **Reeve**, not in the United States . . . yet.Reading:
The most dangerous game

76

☐Do you select what you read, or does it select you? Follow both routes, says **Brodney**.

Corporate culture

80

☐How things are done is more a cultural than a technical thing—the former determines the acceptability of the latter. **Schein** demonstrates.Innovation: A first-person
tale of joy: Part 1

84

☐That nearly all 33 references in **Schroeder**'s story are patents says a lot. Let him tell you how they came to be used.Conserving genetic
resources

92

☐As molecular biologists create "new" life forms, **Danoff** worries about the effects of homogenizing the gene pool.

Contact!

Surface-sensitive
analytical
techniques: Part 2

98

☐**Kelley** introduces the first specific techniques of CHEMTECH's new series.

Our Reaction Access System

106

☐How Kodak chemists handle their knowledge of chemicals is related by **French**.The world of
polycarbonates

112

☐Discovered by accident, these materials exemplify the excitement of engineering plastics. **Sikdar** illustrates.Molecular cells, their guests,
portals, and behavior

120

☐His Roger Adams Award address gave **Cram** an opportunity to encapsulate his work linking chemistry and biology.

65 The Industrial Chymist

☐in which **Luberoff** asks, "What are you doing for the rest of your life?"

66 Write On

☐

in which we hear about patents and bosses and why ellipses are so elusive.

66 P. S.

☐

in which are updates on separating elastomers and making chlorophylls.

67 Heart Cut

☐in which **Casper, Kreps**, and **Thyagarajan** report on fighting on the paint can front, saving yourself during a hotel fire, and the lowly fishing line.

70 View from the Top

☐in which **Lehr** tells how he grew in-company entrepreneurs.

89 However . . .

☐in which **Noether** wonders about the risks attendant on gaining new knowledge.

90 Guest Editorial

☐in which **Ligon** expresses concerns about radiation processing of food.

96 Furthermore

☐in which **Růžicka** shows how flow injection analysis is being used now.

119 TECHGRAMJapan

☐

OBC The Last Word

☐in which **Jacobs** and **Weshner** ask, "Are you attracted to the opposite sexes?"

The Innovator's Magazine FEBRUARY 1987

**The new world of
polycarbonate**

Page 1

AUGUSTANA LIBRARY
UNIVERSITY OF ALBERTA

- Your notebook** ☐ **135** "If a tree falls in the forest and no one is there to hear, does it make any noise?" **Bjork** addresses the technologist's version of that paradox.
- Innovation: How it really happens** ☐ **136** Making things work as opposed to just finding out how they work is where **Schmitt** finds the action.
- Lab coat or suit coat** ☐ **138** This glimpse of what a scientist does in D.C. was provided by **Fredell** at the Student Pugwash Conference.
- The three faces of chemistry** ☐ **140** If you want to know about chemistry in breadth, ask someone who has held senior posts in academe, government, and industry—ask **Hammond**.
- Patenting pitfalls . . . and their avoidance** ☐ **144** So you want to get a patent. Well, look out, says **Simmons**.
- Selling service chemicals** ☐ **150** Some call them specialties, some functional chemicals, some formulations. Whatever the name, **Hamilton** shows how modern corporate strategies recognize and fill need niches.
- Polymers in pursuit of strength** ☐ **156** Molecular architecture is clearly illustrated by **Wittcoff's** examination of newer plastics.
- Learn process engineering** ☐ **162** Forging the critical link between what can be done in the lab and what can be done at a scale big enough to help humanity is the process engineers' job. **Scarrah** shows what they do.
- Applying statistics to solving chemical problems** ☐ **167** If **Hunter** doesn't imbue enthusiasm for using formal methods of data gathering and interpretation, you just don't understand the problem.

**What you can see with X-rays:
Part 3**

- ☐ **170** **Contact!**
Because they're so energetic, high-energy X-rays get well below the surface. **Kelley** shows what they'll show you.

**Separate optical isomers
by chiral HPLC**

- ☐ **176** In living systems, chirality is critical to activity, a fact largely ignored because chiral separations were so difficult. No longer, explains **Okamoto**.

**Controlling fiber content
in foods**

- ☐ **182** Fiber's good for us. So why did processors remove it from our food supply? **Bookwalter** shows how they're putting it back.

Gene machines

- ☐ **186** Here's a shopping list of DNA synthesizers that can do in hours what used to take . . . **Van Brunt** shows just how far we've come.

- ☐ **129** **The Industrial Chymist**
in which **Luberoff** reacts to being snowed.

- ☐ **130** **Write On**
in which we hear more about interfaces, patents, and cheese.

- ☐ **131** **P. S.**
in which there's more on Star Wars and salaries.

- ☐ **132** **Heart Cut**
in which **Dolbear**, **Piccolini**, and **Thyagarajan** explore pattern recognition, a new spectroscopy, and safety disks.

- ☐ **152** **View from the Top**
in which is **Saga Corporation's** Employee Bill of Rights.

- ☐ **153** **The winner**
in which selection of CHEMTECH's best 1986 paper portends chemical technology's challenges.

☐ **161** **TECHGRAMJapan**

- ☐ **OBC** **The Last Word**
in which **McMaster** explains why the locomotive will never replace the canal boat.

CHEMTECH

The Innovator's Magazine MARCH 1987

- Cleanliness is . . .** 199 ☐ How people react to chemicals is determined by how people visualize them. Semiotician **Barthes** illustrates.
- Jobs for problem solvers** 200 ☐ Those who know how to use chemicals can do many things. **Curry** describes their variety and tells how to get paid for doing them.
- The corporate family** 202 ☐ People unconsciously, if not consciously, demand tender, loving care from their company, which **Kell** found out by talking to psychologist Levinson.
- Pate de foie gras** 206 ☐ This you won't believe. But then, when did you ever believe **Asimov** in April?
- Maximizing chemical profits** 218 ☐ It's all in the planning, and **Kline** shows how to do it.
- Bioceramics come of age** 224 ☐ How close are we to a bionic human? Closer than ever before, reveals **Boretos**.

Contact!

- Electron microscopy: a tutorial** 232 ☐ "You can see a lot just by looking," according to Yogi Berra. **Kelley** introduces a sharp looking technique.
- Try liquid crystal polymers** 242 ☐ A conceptually new kind of stuff is on the market, and **Dole** knows what it's good for.
- Synthesis with tethered molecules** 246 ☐ When unruly reactants aren't wholly free to move, they often behave quite civilly. **Ford** tames a variety of reagents by holding them on polymer surfaces.
- Process control with a computer** 251 ☐ The key to tying quality to fancy chemistry is process control, and the computer has arrived just in time, notes **Stephanopoulos**.

193 The Industrial Chymist

☐ in which **Luberoff** praises Manahan's book about chemicals.

194 Write On

☐ in which those who don't trust SDI sound off.

195 P. S.

☐ in which the smoke gets thicker around marijuana testing.

196 Heart Cut

☐ in which **Dolbear, Kreps, and Piccolini** find references to gas phase polymerization of propylene, an imaginative power company, and a new stereo-specific twist.

214 Guest Editorial

☐ in which **Bill Flank** focuses on the problem of technological illiteracy and **Sandy Flank** poses a solution.

217 TECHGRAMJapan

☐

OBC The Last Word

☐ in which **Chace** tells a story you can hear but you can't read.

The Innovator's Magazine APRIL 1987

**A scientific visit
to Viet Nam**

265

☐

Think you have problems funding research? Not compared to what it's like in the country the U.S. left more than 10 years ago, says **Weiss** in his trip report.

But will it be a success?

270

☐

The classic chemical product profile chart gets a facelift as **Odioso** applies it to consumer products.

Drinking and drugging

274

☐

How a drug is defined might surprise you. What the government and industry are doing about abusers is related by **Axel**.

**Innovation: A first-person
tale of joy: Part 2**

280

☐

Schroeder tells the rest of the story of the development of fluorinated products.

Planning without pain

288

☐

How does a project manager track a multitude of tasks . . . and know that each is "on time"? Try a network design, says **Rosenau**.

Contact!**Ultimate surface sensitivity:
Part 5**

294

☐

Learning about surfaces by bombarding samples with ions is undergoing a renaissance, according to **Kelley**.

**The basics of molecular
surfaces**

300

☐

Clusters of atoms have different properties than bulk collections. How you make clusters and how they react is told by **Kaldor, Cox, Trevor, and Zaklin**.

The interleukins

308

☐

The function of these particular hormones has only recently been illuminated. **Henney, Urdal, and Dower** provide a detailed look.

**Chelating agents in
organic synthesis**

313

☐

How transition metal ions are complexed determines their usefulness. **Hart** illustrates with applications.

Fuel cell + concentrator

316

☐

The chlor-alkali industry consumes large amounts of energy, so wouldn't it make sense to improve its efficiency? You be the judge of a system proposed by **Taylor, Waterhouse, and Gelb**.

257 The Industrial Chymist☐

in which **Luberoff** tells us that waiting is part of the creative process.

258 View from the Top☐

in which **Smith** discusses why an artist might build a better car.

260 Write On☐

in which SDI gets blasted again.

260

☐**P.S.**

in which nuclear winter remains uncertain.

261

☐**Heart Cut**

in which **Blisio, Dolbear, and Piccolini** compare antiques and waste, dabble in diamonds, and mention motionless mixers.

287 TECHGRAMJapan☐**OBC The Last Word**☐

in which **Wendland** sits by the fire and recites.

CHEMTECH

The Innovator's Magazine MAY 1987

From revolution to evolution

328

Both processes took place in polymer history. Which events were which are distinguished by **Mark**.

☐

Risky business

332

Insurance is a private enterprise that's supposed to make money like any other. Is it turning into a gambling proposition, with the customer as the "house"? questions the **Economist**.

☐

Leaders and managers

336

Leaders choose goals that managers implement. **Bennis** says we don't have enough of the former.

☐Yes, no, and relatively:
Part 1

340

Why should computers make decisions on a go/no-go basis when people rarely do? Machines should think fuzzy, explains **Zadeh**.

☐

Graduate chemistry co-op

352

Northeastern's school-work program: **Davies** tells how and why it works.

☐Yes, Veronica, Stirling engines
are good for something

358

The best applications are not in cars but in IR vision, boats, and remote power stations. **Walker** and **Fauvel** listen in as Uncle Joe tells Virginia's precocious younger sister what's going on.

☐Technology of amorphous
alloys

363

Materials that resist corrosion and can be magnetically directed with ease are the topic of this review by **Liebermann** and **DeCristofaro**.

☐

The remarkable active site

368

Zeolites made of SiO_2 substituted occasionally with Al are used for catalysis around the world. How they developed is recounted by **Weisz**.

☐

Directivity in catalysis

374

Rather than taking what you get, why not get what you want? Control of stereochemical activity is a relatively new area discussed by **Crabtree**.

☐

Cells sell

378

For monoclonal antibody production to be profitable, it must be scaled up. **Birch** describes how that's done.

☐

321 The Industrial Chymist

☐

in which **Luberoff** wonders what the public has gotten in return for spending generously on radon research.

323 Write On

☐

in which we consider fire and ice and give chemistry graduates one more examination.

323 P.S.

☐

in which the plane truth about SDI comes out.

324 Heart Cut

☐

in which **Bisio**, **Kreps**, **Piccolini**, and **Thyagarajan** look on as worms challenge rats. *E. coli* starts to play ball, and Jake Garn performs phase separations in space.

327 View from the Top

☐

in which the American Chemical Society describes its version of long-term planning and management.

345 TECHGRAMJapan

☐

346 Random Samplings

☐

in which **Hahn** and **Boardman** clarify the role of statistics in quality control.

350 The Division's Page

☐

in which **Vandenberg** collates polymers with chemistry education.

OBC The Last Word

☐

in which an engineer's nightmare comes true in Hawaii.

CHTEDD

CHEMTECH (ISSN 0009-2703) is published monthly by the American Chemical Society at 1155 16th St., N.W., Washington, D.C. 20036. Second-class postage paid at Washington, D.C., and additional mailing offices. POSTMASTER: Send address changes to CHEMTECH, Membership and Subscription Services, P.O. Box 3337, Columbus, Ohio 43210.

Subscriptions—1-year prices: Members, \$34; Nonmembers (individual personal use), \$44; Companies, institutions, libraries, \$244; Student members, \$15; Mexico and Canada add \$6/year for postage. Europe add \$11/year for postage. All other countries add \$17/year for postage. All foreign subscriptions are sent by air freight. Send payment to ACS Controller, 1155 16th St., N.W., Washington, D.C. 20036. Single copies, \$21 (current), \$24 (pre-1987). Phone orders can be placed for printed, microfiche, and

microfilm editions by calling, toll free, the sales office at (1)(800) 227-5558 from anywhere in the continental U.S. From Washington, D.C., call 872-8065. Visa, Master Card, and American Express accepted. Rates above do not apply to nonmember subscribers in Japan, who enter subscriptions with Maruzen Co. Ltd., 3-10 Nihon bashi 2-chome, Chuo-ku, Tokyo 103, Japan; (03) 272-7211.

Editorial Matters: Refer all editorial matters to B. J. Luberoff, Editor, CHEMTECH, American Chemical Society, 1155 16th St., N.W., Washington, D.C. 20036.

Advertising: Centcom, Ltd., T. Koerwer, Pres., 500 Post Road East, Westport, CT 06880; (203) 226-7131.

Service: For change of address, send old label with new address to ACS Membership and Subscription Services, P.O. Box 3337, Columbus, Ohio 43210. Allow 6 weeks to effect change. Refer claims for missing issues, information on status of accounts, etc., to this office. Claims for missing issues will not be allowed if (a) notice of address change was not received in specific time; (b) North Ameri-

can claim was made 90 days beyond issue date; (c) other claim was made one year beyond issue date.

CHEMTECH

The Innovator's Magazine JULY 1987

- | | | |
|--|------------|--|
| The future belongs to the photon | 520 | The question posed to <i>The Economist</i> is, "What role will chemists have in the photonics revolution?" |
| Problem solvers: A technical profile | 523 | Dow's program for developing analytical chemists could work for other disciplines. Crummett shows how. |
| On the comparative unimportance of the Invective Effect | 526 | A rare peek into the file of referee opinions that nurtured the growth of physical organic chemistry is shared by Davenport . |
| Corporate planning: A rich communication device | 532 | This workbook is useful for those who plan and those who never have. Hax and Majluf extracted it from experiences of several corporations. |
| Deciding what to start with | 538 | Coal, air, and water were once alleged to be the organizer's starting materials. Now Deyrup and Katritzky have a structure-instructed computer program that leads to better choices. |
| Superconductivity at accessible temperatures | 542 | What it's all about (or was, anyway, at press time) is laid out by Engler . |
| Ceramics for cars | 552 | How one wrestles with using a material that's thermally stable and strong but also brittle is nowhere better illustrated than in Milberg's analysis. |
| Scale-up: Three easy lessons | 560 | Often, in performance chemicals, the name of the game is getting from lab to production quickly. Marynowski's case studies will help others do so. |
| Greater than the sum of its parts: A new instrument | 564 | A machine that can simultaneously subject a sample to XRD, MS, and DSC promises unique insights into materials. Fawcett relates how it's done—after defining the acronyms. |
| Homogeneous catalysis . . . in water | 570 | The nicest of solvents doesn't dissolve organics well. Nevertheless, Kuntz's successful hydroformylation illustrates what can be done <i>in aqua</i> . |

The Innovator's Magazine SEPTEMBER 1987

- | | | |
|---|------------|--|
| Old chemist, new tricks | 583 | Those who always wanted to teach will enjoy reading about Arrigo's conversion. |
| The cost of regulation is not trivial | 584 | Is consumer whiplash coming? Insight makes a case for "yes." |
| Catalysis: A retrospective | 586 | Although catalysis is still as much art as it is science, useful predictions can still be made. Burwell relates how we've gotten to that point, then prognosticates. |
| Start-up? Expect the unexpected | 597 | Garber has a nice business. Here's how he managed to get it. |
| Don't forfeit your patent rights | 600 | The height of frustration for technologists is losing the ability to protect their work. Cooper keeps us out of that kind of trouble. |
| Ten commandments of project management | 602 | Anything a technologist tackles can be thought of as a "project." And any project will profit from Walker's teaching on how it should be run. |
| Transporting solar energy with chemistry | 606 | Although parabolic solar reflectors can generate high temperatures, there's still the problem of using the resulting energy. Reversible chemistry to the rescue, says Diver . |
| Biotechnology: It's time to scale up and commercialize | 612 | Getting engineered genes to make useful quantities of products takes lots of technology beyond biology. Rosén details what's implied by "lots." |
| Polymers make the grade | 620 | Making all-season lubricants for modern machines took some fancy molecular architecture. Rubin describes it. |
| MTG: Origin, evolution, operation | 624 | How exciting to see a plant based on new technology come on stream! Chang and Silvestri tell how it happened with the methanol-to-gasoline process. |
-
- | | | |
|----------------------------|------------|---|
| Look to the surface | 632 | Contact
Here's the wrap-up of Kelley's series on surface characterization. |
|----------------------------|------------|---|
-
- | | | |
|---|------------|--|
| H₂O + H₂S: A novel hydrogen transfer solvent | 636 | Add sulfur to coal? Crazy! Yet Stenberg and Nowok have good reason to do so. |
|---|------------|--|

577 The Industrial Chymist

in which **Luberoff** plugs the industrial physical chymist.

578 Heart Cut

in which **Dolbear**, **Kreps**, **Piccolini**, and **Thyagarajan** shop for bargain-basement DNA and souped-up PCs, then stop to watch corrosion on TV and indulge in some ALE.

582 View from the Top

in which **Stumpe** describes the conversion of R&D to R&I.

593 TECHGRAMJapan**594 Well Said!**

in which **O'Hayre** concludes his series with the ultimate rule for writers.

OBC The Last Word

in which **Kovacs** traces chemical careers.

CHEMTECH

The Innovator's Magazine OCTOBER 1987

Page 636

- Executive failure** 648 ☐ Why do some high-level executives perform worse than expected? **Horn** offers some theories.
- Not-so-superconductors** 649 ☐ There are a lot of potholes in the road from scientific breakthrough to commercial breakthrough. **The Economist** explains.
- Dental materials: Performance chemicals embodied** 652 ☐ Why most of us now have a mouthful of chemicals is illustrated by **Christensen**.
- Risk, science, and democracy: Part 1** 658 ☐ Whither environmentalism, now that it's been around for nearly a quarter-century? **Ruckelshaus** should know.
- The long road to technological literacy** 663 ☐ Finally, somebody's replaced the science requirement for liberal arts majors with a technology curriculum. **Flusche** tells what it includes, how it's doing, and why it's so hard to implement.
- Strategy development: Line vs. staff roles** 667 ☐ The case history **Owens** relates puts the action where it belongs.
- Making robots fly** 670 ☐ In space-speak, those mechanical workfolk in your lab are flying. **Curley** tells how to make 'em do so.
- Plant production of fine chemicals** 674 ☐ If fed properly, plant tissue cultures might be the chemist's most accessible biotech tool, say **Whitaker** and **Evans**.
- Polymer coatings for optical fibers** 680 ☐ Typical of the chemist's focus on "things" instead of "stuff" are the demands on this new way to convey information. **Blyler** and **Aloisio** reveal its materials challenges.
- Attach catalysts and reagents to polymers that dissolve . . . sometimes** 686 ☐ Leashing reaction centers to heterogeneous supports offers many advantages and quite a few disadvantages. But if the support dissolves . . . see what **Bergbreiter** has to say about *that*.
- Nature's underwater adhesive specialist** 692 ☐ The lowly mussel has a lot to teach chemists about adhesion, as **Walte** makes clear.
- A toxicological view of pesticides** 698 ☐ This illustration of product stewardship is by **Yang**.

641 The Industrial Chymist☐ in which **Luberoff** gives journalists what they deserve.**643 Heart Cut**☐ in which **Dolbear**, **Kreps**, and **Small** have singled out some singular science and such.**646 View from the Top**☐ in which **Smith** rationalizes industry participation in a new school for science journalism.**685 TECHGRAMJapan**☐**IBC Puzzle Solution**☐ in which **Scimone's** "Chemacroscopic" (CHEMTECH, September 1987, OBC) is deciphered.**OBC The Last Word**☐ in which it is shown why organization charts should never be drawn in ink.

CHEMTECH

The Innovator's Magazine NOVEMBER 1987

- The power of a chemistry set** 712 ☐ Whether A. C. Gilbert and Chemcraft are familiar names is a function of age. Enjoying **Kauffman's** recollection isn't.
- For the adventurous few:
How to get rich** 715 ☐ Build. Conquer. Don't just sit there, says **Train**.
- Engineering with rubber** 720 ☐ What materials science can be about is illustrated by **Mullins**.
- Buy with care** 728 ☐ How *caveat emptor* is implemented by chemists is explained by **Forman**.
- Pacing the chemicals
industries** 731 ☐ Where chemicals *can* go was laid out by Pimentel. Where they *will* go is up to management, notes **Loos**.
- When in the course of
human events . . .** 734 ☐ Even great men of letters like **Jefferson** had to put up with peer review.
- Risk, science, and democracy:
Part 2** 738 ☐ Here **Ruckelshaus** continues his "celebration" of the birth of environmentalism.
- Making membranes** 742 ☐ Rapidly we're learning why Nature selected membranes to perform her separations. **Johnson** helps us tailor membranes to our other needs.
- Heat storage: A materials problem** 746 ☐ If you want to recover heat at 90 °C and use it at 40 °C, water is the ideal medium. What you hold it in is the problem. **Voigt, Mierke, Ruhnau, and Möller** tackle it.
- Process polymers with
supercritical fluids** 750 ☐ It has been happening—unrecognized—on a commercial scale since the 1950s. Now **Scholsky** provides the scientific underpinning to permit the technology to grow.
- Polymeric electrolytes** 758 ☐ If polymers are organic, how come some conduct electricity? And *how*? And so what? **Blonsky, Clancy, Hardy, Harris, Spindler, Tonge, and Shriver** respond.

705 **The Industrial Chymist**
☐ in which **Luberoff** defines "quality."

707 **View from the Top**
☐ in which **Bennett** encapsulates your Society.

708 **Heart Cut**
☐ in which are introduced new cut-ups **Sivaram, Torchia, and Young**.

714 **TECHGRAMJapan**
☐

718 **Guest Editorial**
☐ in which **Clarke** gives an alternative to technoporn.

765 **Index 1987**
☐ in which, believe it or not, you can read with benefit.

OBC **The Last Word**
☐ in which **The Economist** looks at nutty companies . . . and the bosses who made them.

Volume 17, No. 12, pages 705-768 ISSN 0009-2703
CHTEDD

CHEMTECH (ISSN 0009-2703) is published monthly by the American Chemical Society at 1155 16th St., N.W., Washington, D.C. 20036. Second-class postage paid at Washington, D.C., and additional mailing offices. POSTMASTER: Send address changes to CHEMTECH, Membership and Subscription Services, P.O. Box 3337, Columbus, Ohio 43210.

Subscriptions—1-year prices: Members, \$34; Nonmembers (individual personal use), \$44; Companies, institutions, libraries, \$244; Student members, \$15; Mexico and Canada add \$6/year for postage. Europe add \$11/year for postage. All other countries add \$17/year for postage. All foreign subscriptions are sent by air freight. Send payment to ACS Controller, 1155 16th St., N.W., Washington, D.C. 20036. Single copies, \$21 (current), \$24 (pre-1987). Phone orders can be placed for printed, microfiche, and

microfilm editions by calling, toll free, the sales office at (1)(800) 227-5558 from anywhere in the continental U.S. From Washington, D.C., call 872-8065. Visa, Master Card, and American Express accepted. Rates above do not apply to nonmember subscribers in Japan, who enter subscriptions with Maruzen Co. Ltd., 3-10 Nihon bashi 2-chome, Chuo-ku, Tokyo 103, Japan; (03) 272-7211.

Editorial Matters: Refer all editorial matters to B. J. Luberoff, Editor, CHEMTECH, American Chemical Society, 1155 16th St., N.W., Washington, D.C. 20036.

Advertising: Centcom, Ltd., T. Koerwer, Pres., 500 Post Road East, Westport, CT 06880; (203) 226-7131.

Service: For change of address, send old label with new address to ACS Membership and Subscription Services, P.O. Box 3337, Columbus, Ohio 43210. Allow 6 weeks to effect change. Refer claims for missing issues, information on status of accounts, etc., to this office. Claims for missing issues will not be allowed if (a) notice of address change was not received in specific time; (b) North Ameri-

can claim was made 90 days beyond issue date; (c) other claim was made one year beyond issue date.
